**AtStaff, Inc., announces relationship with Oracle****AtStaff's ClairVia® staff and demand management systems to complement Oracle's PeopleSoft Enterprise Human Capital Management solutions**

**DURHAM, NC– October 27, 2008** — AtStaff, Inc., today announced it is working with Oracle to help meet the needs of healthcare organizations for outcomes-driven workforce solutions in enterprise resource planning. As part of this announcement, AtStaff has also joined the Oracle® PartnerNetwork, Oracle's global partner community.

"We're very excited to work with Oracle, an outstanding software company with a very strong and growing presence in healthcare," says Beth Pickard, President and CEO at AtStaff, Inc. "This is a great opportunity for us to introduce the outcomes-driven, evidence-based capabilities of our ClairVia® solutions to Oracle's base of healthcare organization customers."

"Oracle customers expect leading-edge software solutions," says Marc Perlman, Vice President of Oracle's Healthcare and Life Sciences Industry Business Unit for North America. "AtStaff is redefining the staff management industry by meeting performance-oriented clinical and financial objectives. AtStaff's ClairVia systems are built on the premise that to deliver safe, high-quality staffing care, you have to constantly measure and monitor each patient's clinical need for staffing care. ClairVia systems provide performance-oriented data interoperability with PeopleSoft Human Capital Management applications."

Through this relationship, AtStaff's best-of-breed set of ClairVia staff and demand management systems will help complement Oracle's PeopleSoft Enterprise Human Capital Management family of applications.

**ClairVia systems provide performance-oriented data interoperability with PeopleSoft Human Capital Management applications**

Given the critical need to improve care quality, patient safety, cost control, patient throughput, and staff satisfaction, a staff management system today should go far beyond process-oriented improvements, such as automating paper-based scheduling. ClairVia software integrates patients' clinical data and outcomes assessments to help ensure that staffing meets each patient's care requirements as well as the healthcare organization's financial expectations.

PeopleSoft Enterprise HCM solutions include Human Resources, Learning Management, Recruiting Solutions, Workforce Performance Solutions, Benefits Administration, Flexible Spending Account (FSA) Administration, Payroll, Payroll Interface, Pension Administration, Time and Labor, and Services Procurement.

-more-

A combined ClairVia and Oracle solution provides the means for constant communication, interaction and collaboration. At any time and place, users can submit schedule requests, sign up for “shift opportunities” (available open shifts), exchange shifts with colleagues, and view their current and future schedules.

Real-time manager dashboards in ClairVia enable managers to go beyond retrospective productivity reporting and manage productivity proactively so that decision-makers have the time and staffing options to improve both quality and cost control. Detailed productivity measurements are available on dashboards and through reports that cover all staffing areas, such as patient care units, outpatient services and ancillary departments.

### **ClairVia’s staff and demand management solutions**

AtStaff’s ClairVia staff and demand management systems for the hospital enterprise marketplace include:

- ClairVia<sup>®</sup> Staff Manager - Integrates advanced staff management, including enterprise scheduling and staffing, real-time decision support, Web-based dashboards, and productivity measurement and reporting, to facilitate daily staffing coverage, allocation and deployment.
- ClairVia<sup>®</sup> Demand Manager - Leverages patient-tracking and flow-management technology to measure, monitor and predict patient-specific care demand.
- ClairVia<sup>®</sup> Outcomes-Driven Patient Acuity - Calculates workload for staffing levels and skill mix based on achieving patient-specific outcomes.
- ClairVia<sup>®</sup> Caregiver Assignment - Selects and assigns specific caregivers based on each patient’s individual care and workload requirements.
- ClairVia<sup>®</sup> eWork - Ensures seamless decision support, and quality and cost control for external supplemental staff.

### **About AtStaff**

AtStaff develops demand management and staff management software that enables healthcare organizations to improve healthcare quality and patient safety, increase profitability, and enhance staff recruitment and retention. Hospital enterprise solutions and physician scheduling systems from AtStaff serve more than 1,200 healthcare organizations, medical facilities, nursing departments and group practices.
